Soft skills

- Extremely creative
- Stress resistant
- Communicative
- Very motivated
- Team-player
- Punctual
- Loyal

Hello!

Besides of a simple enumeration of my skills, I would like to tell you a little more about myself. I've been in the web-development for more than four years already. Most of this time it was just a hobby, but for the last year I have significantly improved my coding skills. I have a huge experience, commercial and non, in developing websites, especially the static ones.

For the past half a year I was working as a freelancer on [Upwork](#) freelance marketplace. During this time I have created websites for several NFT and Web3 start-ups, such as [DDD](#), [Orangepill](#) and [yPredict](#). As well as commercial, I have developed some personal portfolio projects: [Aquarium](#), [Brume Interior](#), [Lunar Adventure](#) and [Raya Park](#). Basing on my skills and my experience, I think, that a justified salary for me will be \$600.

Except of the web-development, I was working for one year as an online salesman in a company Top Sales Group (Kyiv). If you wanna know a little more about me as a person, I have quite common hobbies: movies, music, books and sport.

I know about the problem in the industry, when companies don't really wish to hire junior developers, because they are afraid, that those people will leave the company after getting some experience. Well, I'm a very loyal employee. I promise, that if you hire me, I'll be productively working in your company for many years.

That's about all, what I wanted to say. I hope, that you've been satisfied and impressed by my CV and we will continue our dialog further.
